

# WEB RIGGING SERVICES LTD

## Work Platform Decking & Netting Systems

### Course Outline

#### ADVANCED INSTALLER (SUPERVISOR & INSPECTOR)

##### Overview

This one day course is designed to instruct personnel in the specific systems, requirements and techniques for supervising the installation, maintenance, inspection and safe use of the WEB Platform Decking (WPD) and Netting (WPN) systems.

This can be done at one of the WEB Rigging Services purpose-designed training facilities or a suitable client facility.

The candidates must have successfully completed the WEB Work Platform Decking & Netting Systems Basic Installer's Course.

Due to the requirements for rope access, candidates must hold current qualifications in accordance with national requirements, preferably Level 2 or above.

For offshore work candidates must hold OPITO or EMTA Level 2 qualifications or equivalent.

On completion of a final practical assessment and final written paper the successful candidate will be issued with a WEB Rigging Services Certificate of Competence – Advanced Installer, which should be refreshed after three years.

##### Course Content and Structure

###### Day 1: Review of WPN & WPD Basic Installer's course

- Legislative requirements

- Planning and Job Safety Analysis

- Equipment specifications and standards

- Calculation of loadings

- Understanding installation drawings

- WPN & WPD System inspection and maintenance

- Advanced practical installation and usage of WPN & WPD systems

- Rescue planning and practical rescue from WPN & WPD systems

- Practical and written assessment

*This day typically comes straight after the three-day Basic Installer course – the four days in a row is sufficient to get capable trainees to competence in installation, inspection and supervision.*
